Relating To Accessibility

Accessible Design
Is Good Design

The Benefits Of Responsive Design

Are The Benefits Of Accessible Design

- → Requires cross-team collaboration
- → Is never 'done'
- → Benefits an ever-expanding audience
- → Directly impacts conversion and sales
- → A person expects their hardware to be supported

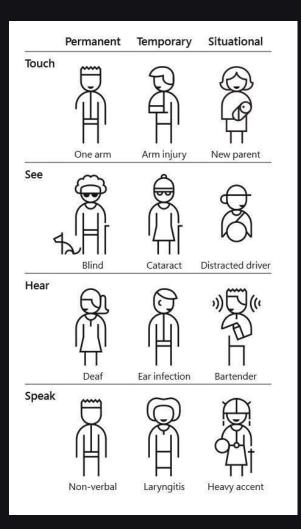

→ Products only require responsive design

Tell Me Why

Web Accessibility is

Fundamentally Misunderstood

The POUR Principles Of Accessibility

The POUR Principles Of Accessibility

Р

Perceivable

Providing content that can be interpreted in layers by multiple senses.

Operable

Providing content that can be interpreted in layers by multiple senses.

- → Images with descriptive alternative text
- → Videos with captions and/or subtitles
- → Indicating state with more than just color

- → All functionality available by mouse must be available by keyboard
- → Visible and consistent focus states on all interactive elements
- → All pages have clear titles with descriptive, sequential headings

The POUR Principles Of Accessibility

Understandable

An experience that can be reliably navigated with simple content written for the audience.

Robust

Creating content that can be accessed by a wide set of devices and platforms.

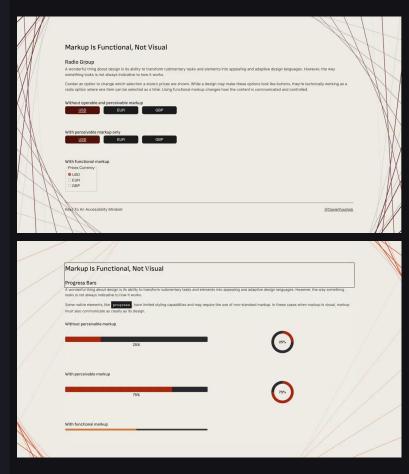

- → Defining content language(s)
- → Consistent landmarks, like navigations
- Error messages are descriptive and, when possible, actionable

- → Validating the rendered HTML to ensure it can be reliably interpreted by devices
- → Using markup to assign names and roles to non-native elements

The Keys To An Accessibility Mindset

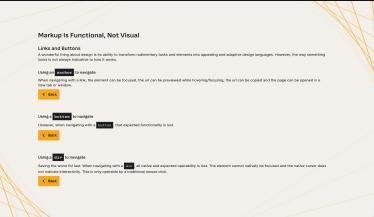

Markup Is Functional

Not Visual

If You Can Do It With A Mouse

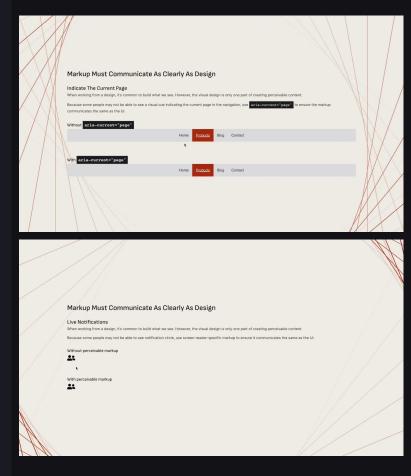

You Can Do It With A Keyboard

Visit CodePen Dem

Markup Must Communicate

As Clearly As Design

How To Know When Content Needs Perceivable Markup

- 1 When design visually communicates state

 E.g. Active page, active tab, loading, disabled
- When information is outside the flow of content E.g. Toast message, dialogs, error messages, tooltips
- When content is dynamic or live *E.g. Notifications, chat, tabs*
- 4 When recreating standard elements

 E.g. Progress bars, accordions, select menus

Use More Than Color

To Indicate State

Recap

Recap

- 1 Perceivable, Operable, Understandable, Robust
- Markup Is Functional, Not Visual
- If A Mouse Can Do It, So Must A Keyboard
- 4 Markup Must Communicate As Clearly As Design
- 5 Use More Than Color To Indicate State
